# How to use a Delta printer to   print a model
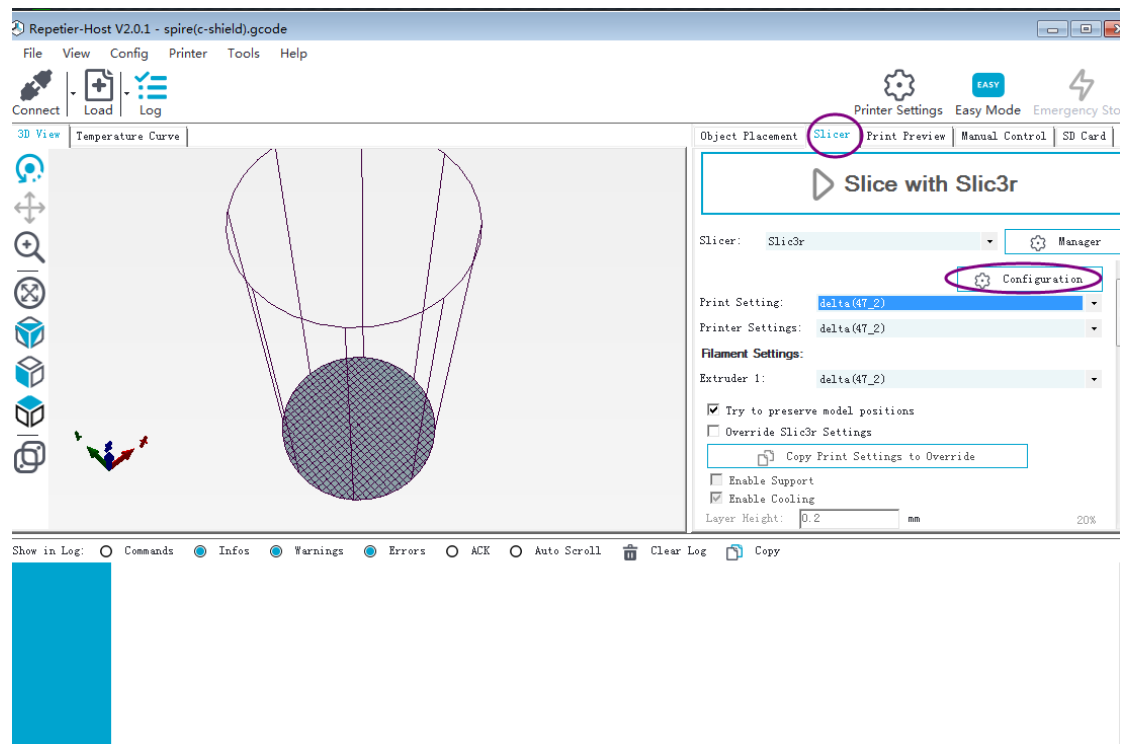

After Installed Repetier host

Then, set the setting for your printer:

After you calibrate the printer.
You can load a model to print.

And click the Slicer Tag:

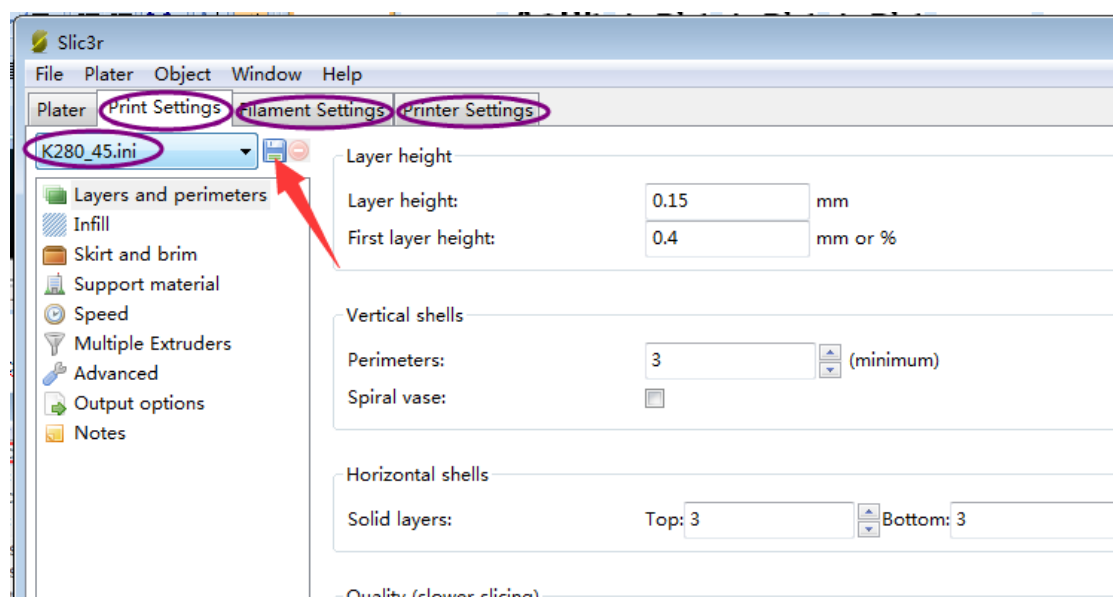

Click the configuration, just open the slic3r.

Load the config file:

After you load a *.ini file (config file)

Check the　Print Settings　　Filament Settings　Printer Settings

Save the *.ini file. (after saved,　charactor"ini" would be disapeared)

Of course , you can change these parameters as you want.

After that. You can see, in the Repetier host. The saved config file is ready

Then slice it

That it is :

Now you can print it from computer (connect to the printer inadvance)

Or

You can save the file to the SD card, and insert it to printer. And printer it from LCD screen.

Have a good time!
